PREFACE

This report contains summaries of streamflow records in the Pacific slope basins in Washington and upper Columbia River basin. It was prepared by the United States Geological Survey in the Water Resources Division, C. G. Paulsen, Chief, under the general direction of J. V. B. Wells, Chief, Surface Water Branch, and B. J. Peterson, Chief, Annual Reports Section.

The data were compiled under general supervision of E. G. Bailey, project engineer, by personnel in district offices under supervision of district engineers, Surface Water Branch, as follows:

T. R. Newell-----	Boise, Idaho
Frank Sermitz-----	Helena, Mont.
F. M. Veatch-----	Tacoma, Wash.

COMPILATION OF RECORDS OF SURFACE WATERS OF PACIFIC SLOPE BASINS IN WASHINGTON AND UPPER COLUMBIA RIVER BASIN, THROUGH 1950

PURPOSE AND SCOPE

This volume is one of a series of reports presenting monthly and yearly summaries of streamflow and reservoir data collected by the Geological Survey. Included with these data are some records furnished by other Federal, State, and private agencies.

The purpose of this series of reports is to make available in summarized form all the surface-water records collected up to September 30, 1950.

The first known streamflow records to be systematically collected in the United States are those for Eaton and Madison Brooks in Madison County, N. Y., by John B. Jervis during 1835. Stream gaging by the United States Geological Survey was begun in 1888. At that time the Congress authorized the Irrigation Survey to be conducted by the Geological Survey in connection with special studies relating to irrigation. The work consisted of the measurement of stage and discharge of a few streams in the West. Since that time the work has expanded so that measurements of stage and discharge of streams and of stage and content of lakes and reservoirs have been made at more than 12,000 gaging stations in the 48 states and the territories of Hawaii and Alaska, of which about 6,400 were in operation on September 30, 1950. The details of the records collected at those stations are contained in annual reports, bulletins, and water-supply papers, which have been issued usually on an annual basis. Most of the records collected over the years are found only in numerous individual volumes, many of which are out of print and difficult to obtain.

The records have been collected mainly in cooperation with State, municipal, and Federal agencies and published in annual reports by the Geological Survey. This series of compilation reports has been prepared by the Geological Survey as a special project not included in the cooperative program.

The data presented in this series of reports consist of records of discharge of streams and contents of reservoirs summarized on a monthly and yearly basis. Results of miscellaneous discharge measurements and, in general, stage records have been excluded. Also included are a bar chart showing the period of record covered by each gaging station and a map of the area showing the location of each station (pl. 1). The reports of this series are uniform in the type of data they contain and in the form of presentation.

In compiling the data for these summary reports, one important feature of the project was to review the analyses and computations originally made on the basis of all information now available. For some stations additional base data, obtained subsequently, allowed for reinterpretation and recomputation of more accurate records of discharge. All records were examined for major computation errors and tested wherever possible by comparison with records of discharge at other stations and weather data. Records that were found to be in need of substantial revision were computed or omitted if revision was not feasible. Estimates of discharge were made to fill short gaps to complete the continuity of the record, whenever practical.

Records furnished by other agencies are incorporated in these reports when they supplement records collected by the Geological Survey, and appeared consistent and reliable. Furnished records were reviewed in the same manner as Geological Survey records whenever base data were available and detailed study was feasible.

STREAM-GAGING PROGRAM

The Geological Survey began to collect records of streamflow in the area covered by this report (fig. 1), which includes the Pacific slope basins in Washington and the upper Columbia River basin, in August 1893 when gaging stations were established on the Yakima and Naches Rivers in Washington. The Washington Water Power Co. installed a staff gage at their dam on Spokane River at Spokane, Wash., in March 1891 and began a systematic collection of stage records. A gaging station on this stream at Spokane was established by the Geological Survey in October 1896. The data from this station supplemented by those obtained from the Washington Water Power Co.'s gage provides a continuous discharge record from 1891 to the present time, which is the longest record in the area covered by this report.

During the period 1891-99, 20 gaging stations were established throughout the area. These were installed to determine water supplies available for irrigation and water power. The records from most of them are of only a few years duration.

The stream-gaging program in the Pacific Northwest has grown continuously since its inception. In general, expansion of the work has come in surges, rather than as a gradual growth as might be expected. The years 1902-3 mark the start of such an era of expansion, resulting from the needs of the newly created United States Reclamation Service for basic streamflow data in the investigation and design of projects in eastern Washington, Idaho, and western Montana. In 1906 the Geological Survey began a State cooperative stream-gaging program with Montana. This was the forerunner of two others soon to follow in 1909, with Idaho and Washington. Participation by the States gave impetus to the expanded program and provided the principal source of funds to sustain the work during the next 20 years.

The Corps of Engineers, U. S. Army, as a result of their congressional authorization to make a comprehensive report on the rivers in the United States, supported a considerable expansion of the work in the Pacific Northwest during 1928. Likewise, this same year the United States Department of State sponsored investigations of the Kootenai River and other international streams in Idaho, Montana, and Washington. The initiation of both programs had a significant effect in advancing stream-gaging activities in the area.

A more recent expansion in the program began in 1942, resulting in part from interest in water supplies available for development of fish resources in Washington, and in part from increased demands for surface-water data incident to the accelerated growth in population, industry, and farming in the region, induced by World War II.

Numerous municipal and private organizations have assisted the Geological Survey in the stream-gaging program, as have many bureaus of the United States and Canadian governments. Details of the cooperation have been acknowledged in the annual water-supply papers.

DESCRIPTION OF DATA

The gaging-station records are arranged in a downstream order. The order used in this report is the same as that adopted for use in the annual series of reports on surface water supply beginning with the water year 1951. In this report, in a downstream direction along the main stem, all stations on a tributary entering above a main-stem station are listed before that station. If a

tributary enters between two main-stem stations, it is listed between them. A similar order is followed in listing stations on first rank, second rank, and other ranks of tributaries. To indicate the rank of any tributary on which a gaging station is situated and the stream to which it is immediately tributary, each indentation in the listing of gaging stations in the bar chart (see p. 10) represents one rank. This downstream order and system of indentation show which gaging stations are on tributaries between any two stations on a main stem and the rank of the tributary on which each gaging station is situated.

The order of listing used in the annual reports through the water year 1950 was different. In those reports all stations on the main stem are listed first in order, proceeding from the headwaters toward the mouth, then all stations on the uppermost tributary from its source to mouth, followed by all stations from source to mouth on the tributaries to the tributary.

The data presented for most of the gaging stations comprise a description of the station, tables of monthly discharge and runoff, and a yearly summary table. The station description gives the location of the gaging station, drainage area, supplemental records available (for some stations), types and datums of gages, average discharge, extremes of discharge, and general remarks concerning the data. When records were furnished by another agency the fact is so stated.

The location of the gaging station and the drainage area are obtained from the best available maps. When more than one site was used and the difference in drainage areas is significant, the area for the latest site is shown first followed by the areas for other sites in chronological order. In some instances drainage-area figures have not been obtained because of the lack of suitable maps or because the boundaries cannot be defined or the effective drainage area determined.

For some stations a paragraph headed "Supplemental records available" gives reference to records other than those given in the present report. Such records may consist of gage-height records for periods other than those for which discharge records are presented, records concerning quality of the water, or the results of periodic discharge measurements.

The gage described first is the present gage or the one used most recently. Information is then given in chronological order for all gages used earlier, giving changes in location, type of gage, or datum. The location or datum of all earlier gages is given with reference to the present or most recently used gage. The datum of the gage is the elevation of the zero of the gage above mean sea level. Where information as to datum is not available, the altitude of the gage is given. This may be determined from topographic maps, river-profile surveys, barometric levels, or where nothing better is available, by estimates based on average fall between a known elevation and the gage or on other known factors. The degree of accuracy of an altitude determination is indicated by the source of the information and to some extent by the refinement to which the figure is given.

The average discharge for a station is the average of all complete water years and is published only if there are five or more complete water years of record. The years used to determine the average are not necessarily consecutive. The average discharge is not published for some stations because of extensive changes in diversion or storage, or other water development, that have occurred upstream.

In general, the momentary maximum and minimum discharges and stages for the entire period of record are published in the "Extremes" paragraph. These are qualified if necessary according to the type of gage used and the completeness of the record. Maximum and minimum discharges at nonrecord-

ing gaging stations are qualified as "observed" unless determined from a graph drawn through actual gage heights which approximates the actual hydrograph.

Under "Remarks" information is given on factors which affect the basin yield and runoff characteristics. These include upstream regulation, diversion, and utilization—a history of changes in these items is given when known. Also, references are made to the records of storage or diversion upstream, if published. When discharge records are furnished by another agency, credit is given under "Cooperation."

The streamflow data summarized in this paper are generally contained in two monthly tables and one yearly table. The first monthly table is a tabulation of monthly and yearly mean discharge in cubic feet per second. These figures represent discharge passing the station; they are unadjusted for storage or diversion upstream. Each monthly figure is the mean flow for the entire month; generally no record for part of a month is tabulated. Likewise, each yearly figure is the mean flow for a full year, and no figure is shown for a partial year. Usually the months are arranged on a water-year basis. Exceptions to this rule are made in connection with seasonal records wherein the months are grouped to give a complete season for each calendar year.

The second monthly table is a tabulation of monthly and yearly runoff in acre-feet.

The third table contains a yearly summary of the streamflow data. The column headed "W. S. P. no." lists the number of the water-supply paper or other publication in which the figures of daily and monthly discharge are published; for early years for which daily discharges were not published, that column lists the report that contains daily gage heights, rating tables, and monthly discharge. If a part of the record has been revised and published, then reference is made to both the original report and the one containing the revised record; if the daily discharge record for the entire year has been republished to include revisions, then only the later report is listed. For some stations the third table is omitted, however, the report containing records for any particular year can generally be found by reference to the tables given on p. 8.

In the third table the momentary maximum discharge for each water year and the date of its occurrence is given whenever obtainable. This is maximum discharge for the water year unless otherwise qualified. For nonrecording gage records, momentary maximums were often obtained from graphs drawn through the gage readings. If a graph was not feasible, then the discharge was computed from the maximum gage height observed, provided it was believed to be of significant value. Momentary maximum discharge believed to be representative of the absolute maximum for the water year is not qualified in any way. Occasionally maximum daily discharges are tabulated, but only when it was not practicable to give momentary maximums and when figures may have general statistical value.

The minimum daily discharge for each water year is listed if known. The annual mean discharge listed in the third table is the same as that given in the yearly column in the first table.

Other data in this table are given for both the water and calendar year and consist of runoff in inches or in acre-feet, or both. These are adjusted or unadjusted for storage or diversion as the occasion demands, but in general no adjustments have been made in the West. In arid regions where the average annual precipitation is less than 20 inches, the computation of runoff in cubic feet per second per square mile and in depth in inches is not ordinarily made.

Most canal and diversion records are given in a single table. There are some records for large canals, however, that are published in the same detail as those for streams. Records of reservoirs also are given in a single table which shows the contents at the end of each month.

Figures of discharge that have been revised as the result of the review made in connection with this compilation are so noted; however, revisions that have been previously published are not indicated as revisions in this report. Revised daily discharges made in connection with this compilation will be published in a latter annual water-supply paper. If only annual maximum discharges are revised and no revision of daily discharge is made for a station, revised annual maximums are given only in this report and will not be republished in a later annual report. Revisions of figures of runoff in inches resulting solely from a revision of the drainage area are not noted as such. Figures that represent corrections of typographical or computational errors where no figures of daily discharge have been revised or changed are indicated as "corrected" in this report. Estimates of discharge made to complete months or years for this report are noted as estimates and as "not previously published."

For a few stations, after reviewing the past records, it was found that part of the previously published records was grossly in error, yet the base data were such that the record could not be improved or revised. For such stations a note listing the periods of record which have been discredited and not republished is given with the records published herein. Stations for which the entire period of record previously published has been discredited are omitted from this report. The following table lists the stations so omitted.

Stations omitted from this report for which the entire record should not be used

Station	Period of record
Toppenish Creek near Toppenish, Wash.....	1908-9.
Clear Creek near Darrington, Wash.....	1910-11.

In addition to the above, records for some other stations in the area, previously published by the Geological Survey in the annual series of reports, are omitted from this compilation. In general, the records of such stations either are too fragmentary to allow computation of monthly mean discharge or are records that did not measure streamflow, total diversion, or return flow and were considered not important enough to warrant publication in this report. These stations are listed in the following table:

Previously published records which are not compiled in this report

Station	Period of record
City of Aberdeen Wynoochee River intake near Monte-sano, Wash.....	1942.
Yaak River near Troy, Mont.....	1910-16.

Note. --Many stations on canals and ditches in the Yakima River basin for the years 1904-5, 1908-11, are not compiled, but are not listed in this table.

PUBLICATIONS

To facilitate publication of streamflow records, the area of the United States is divided into 14 parts whose boundaries coincide with certain natural drainage lines. Formerly, the annual series of water-supply papers on the surface-water supply of the United States was published in 14 volumes, one for each of the 14 parts. Beginning with the report for 1951, the records are published in 18 volumes, including 2 volumes each for parts 1, 2, 3, and 6.

This system is used in publishing the present series of compilation reports with the exception of part 11 which is published in two volumes for the compilation report series only. The boundaries of the various parts are indicated in the following list and on figure 1.

- Part 1. North Atlantic slope basins, in two volumes:
 - A, North Atlantic slope basins, Maine to Connecticut.
 - B, North Atlantic slope basins, New York to York River.
2. South Atlantic slope and eastern Gulf of Mexico basins in two volumes:
 - A, South Atlantic slope basins, James River to Savannah River.
 - B, South Atlantic slope and eastern Gulf of Mexico basins, Ogeechee River to Pearl River.
3. Ohio River basin, in two volumes:
 - A, Ohio River basin except Cumberland and Tennessee River basins.
 - B, Cumberland and Tennessee River basins.
4. St. Lawrence River basin.
5. Hudson Bay and upper Mississippi River basins.
6. Missouri River basin, in two volumes:

8 COMPILATION OF SURFACE WATER RECORDS, PART 12

Reports on surface-water supply containing records from 1899 to 1950 for drainage basins in this report are listed in the following table. The data for any particular gaging station will, in general, be found in the reports covering the years during which the station was maintained.

The records at most of the stations discussed in these reports extend over many years. Miscellaneous measurements at many points other than regular gaging stations have been made each year and are published under "Miscellaneous discharge measurements" at the end of each report.

Reports also have been published that are compilations of records for various areas, usually a single State or drainage basin. These reports contain records previously published (some of which may have been revised), as well as some records not contained in the present series of reports. Such reports for the area covered by this report are as follows:

Water-Supply Paper	Title
492.....	Summary of hydrometric data in Washington, 1878-1919.
870.....	Summary of records of surface water in Washington, 1919-35.
916.....	Summary of records of surface-waters of upper Columbia River basin in Montana and Idaho, 1898-1938.

Records of discharge have been published also in State reports. Some of these are not contained in the publications of the Geological Survey or are revisions of records previously published in its water-supply papers. The following table contains a list of these reports for the area covered by this report.

Note. --In addition to the records contained in the reports listed above, the following States have issued annual or biennial reports in which are contained records of discharge: Idaho, Montana, Washington.

Detailed information on the stage and discharge of many streams during major floods has been included in special reports on these floods published by the Geological Survey. The only recent reports pertaining to floods in the area covered by the present report are the following:

Water-Supply Paper 968-B: Floods of the Puyallup and Chehalis River basins, Washington.

Water-Supply Paper 1080: Floods of May-June 1948 in Columbia River basin.

Circular 191: Floods in western Washington, frequency and magnitude in relation to drainage basin characteristics.

HYDROLOGIC CONDITIONS

The mean annual discharge for three streams of long-term record are shown in figure 2. These streams have runoff characteristics that are generally representative of others in their particular locale. Hydrologic conditions vary greatly in the area covered by this report, owing largely to the wide

dissimilarity of climatic factors in the region. These factors range from extreme wetness in the coastal mountains to semi-aridity in the upper Columbia River basin and are illustrated by the comparative figures of runoff. The average annual runoff in cubic feet per second per square mile for the three streams is as follows: Quinault River, 10.2 cfs/mi²; Cedar River, 5.5 cfs/mi²; Spokane River, 1.6 cfs/mi².

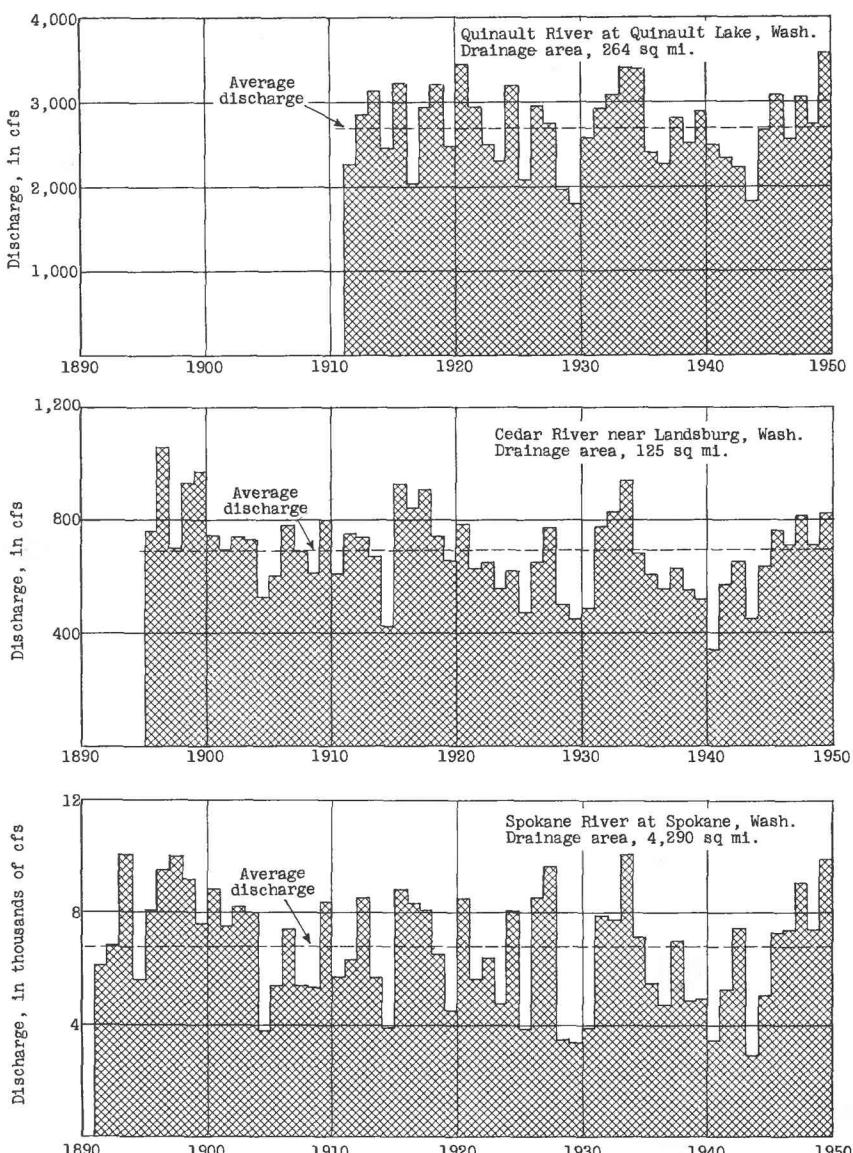

Figure 2. --Yearly discharge at three representative long-term gaging stations in the area covered by this report.

BAR CHART

The following bar chart shows the period of record of discharge of streams and contents of reservoirs for all stations compiled in this report through September 30, 1950. The stations are listed in downstream order (see p. 2) and are numbered consecutively. The number is used to identify the station on the map (pl. 1) showing location of gaging stations.

29. Black River at Little Rock, Wash.

Location.--Lat $46^{\circ}54'10''$, long. $123^{\circ}01'20''$, in NE $\frac{1}{4}$ SW $\frac{1}{4}$ sec. 2, T. 16 N., R. 3 W., on right bank at bridge crossing in Little Rock, 600 ft downstream from Wadeell Creek, and 0.4 mile upstream from Beaver Creek.

Drainage area.--60 sq mi (revised), approximately; does not include area drained by artificial channel from Black Lake to Percival Creek.

Gage.--Water-stage recorder. Altitude of gage is 125 ft (from topographic map). Prior to Sept. 29, 1944, staff gage at same site and datum.

Average discharge.--6 years (1944-50), 162 cfs.

Extremes.--1942-50: Maximum discharge, 1,700 cfs Dec. 28, 1949 (gage height, 7.40 ft), from rating curve extended above 510 cfs; minimum observed, 5.3 cfs Sept. 9, 1944 (gage height, 1.30 ft).

Remarks.--Black Lake at headwaters of Black River is tapped also by an artificial channel through an interbasin divide to Percival Creek which flows into Puget Sound. Records herein do not include inter-basin flow from Black Lake or area drained by this channel. Regulation of Black Lake, by artificial channel to Percival Creek, varies with stage of lake. No other regulation.

Drainage area.--140 sq mi.

Gage.--Water-stage recorder. Datum of gage is 60.0 ft above mean sea level (river-profile survey). Oct. 1, 1931, to Sept. 30, 1932, staff gage 600 ft upstream at datum 5.2 ft higher.

Average discharge.--13 years (1931-32, 1937-49), 1,176 cfs.

Extremes.--1931-32, 1937-49: Maximum discharge, 23,700 cfs Feb. 16, 1949 (gage height, 17.38 ft), from rating curve extended above 6,800 cfs on basis of slope-area determination of peak flow; minimum, 58 cfs Aug. 28, 1947 (gage height, 5.27 ft), apparently result of flash-dam operation.

Maximum stage known, 20.1 ft in January 1935, from floodmarks (discharge, 30,400 cfs).

Flood in November 1949 reached a stage of 19.2 ft, from floodmarks (discharge, 28,200 cfs).

Remarks.--No diversion. Occasional slight regulation from flash dam.

57. Elwha River at McDonald Bridge, near Port Angeles, Wash.^{1/}

Location.--Lat 48°03'20", long. 123°34'55", in NE^{1/4} sec. 33, T. 30 N., R. 7 W., on right bank 300 ft upstream from site of McDonald Bridge (now removed), half a mile upstream from Little River, 7 miles upstream from mouth, and 8 miles southwest of Port Angeles.

Drainage area.--269 sq mi (revised).

Gage.--Water-stage recorder. Datum of gage is 200.00 ft above mean sea level, datum of 1929. Oct. 8, 1897, to Dec. 31, 1901, wire-weight gage and Dec. 9, 1918, to May 1, 1936, water-stage recorder, 300 ft downstream at different datums.

Average discharge.--36 years (1897-1901, 1918-50), 1,441 cfs (revised), adjusted for storage since April 1927.

Extremes.--1897-1901, 1918-50: Maximum discharge, 41,600 cfs (revised) Nov. 8, 1897 (revised) gage height, 14.5 ft, revised, from graph based on gage readings, site and datum then in use), from rating curve extended above 3,300 cfs on basis of two recent determinations of peak flow over dam referred to 1897 datum; minimum daily, 10 cfs Oct. 3, 1938.

Remarks.--Diversion for power returned to stream above station. Flow regulated since 1927 by Lake Mills (see preceding page).

ELWHA RIVER BASIN

58. Elwha River near Port Angeles, Wash.

Location (revised).--Lat 48°05'40", long. 123°33'20", in sec. 15, T. 30 N., R. 7 W., at powerplant in Elwha Canyon, $\frac{2}{3}$ miles downstream from McDonald Bridge, and 6 miles southwest of Port Angeles.

Drainage area.--315 sq mi (revised).

Supplemental records available.--October 1911 to September 1912, gage heights and discharge measurements only.

Gage.--Chain gage. Datum of gage is 74.21 ft (from Olympic Power Company benchmarks). Prior to May 4, 1911, staff gage at same site and datum.

Extremes.--April to September 1911: Maximum discharge observed, 5,520 cfs May 3; maximum gage height observed, 8.3 ft June 13; minimum discharge observed, 458 cfs Aug. 29.

Flood of November 1911 reached a stage of 11.55 ft. Flood of October 1912, caused by failure of Olympic Power Co. dam, reached a stage much greater (stage and discharge not known).

Remarks.--No diversion or regulation above station.

* Not previously published; see footnote to preceding table.

DUNGENESS RIVER BASIN

59. Dungeness River near Sequim, Wash.

Location.--Lat 48°00'55" (revised), long. 123°07'50", in SW $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 12, T. 29 N., R. 4 W., on right bank three-quarters of a mile upstream from Canyon Creek, $\frac{4}{5}$ miles southwest of Sequim, and $1\frac{1}{2}$ miles upstream from mouth.

Drainage area.--156 sq mi. At site prior to 1931, 157 sq mi (revised).

Gage.--Water-stage recorder. Datum of gage is 569.3 ft above mean sea level (from river-profile survey). June 8, 1923, to Sept. 30, 1930, staff gage half a mile downstream at different datum. June 19 to Aug. 12, 1937, staff gage at present site and datum.

Average discharge.--20 years (1923-30, 1937-50), 340 cfs.

Extremes.--1923-30, 1937-50: Maximum discharge, 6,820 cfs Nov. 27, 1949 (gage height, 7.3 ft), from rating curve extended above 2,000 cfs on basis of slope-area determination of peak flow; minimum observed, 77 cfs Sept. 10, 1928.

Remarks.--No diversion or regulation above station.

Note.--1931-50 not previously published by Geological Survey; furnished by city of Tacoma.

71. North Fork Skokomish River near Potlatch, Wash.

Location (revised).--Lat 47°19'40", long. 123°14'30", in NE¹NE¹ sec. 7, T. 21 N., R. 4 W., on left bank 1 mile upstream from mouth, 6 miles southwest of Potlatch, and 7 miles downstream from Cushman Dam No. 2.

Drainage area.--117 sq mi, includes 99 sq mi above Cushman Dam No. 2 which is normally non-contributing.

Gage.--Water-stage recorder. Datum of gage is 63.49 ft above mean sea level (levels by city of Tacoma). Prior to May 10, 1950, water-stage recorder 200 ft downstream at same datum.

Average discharge.--5 years (1944-49), 94.6 cfs (unadjusted).

Extremes.--1944-50: Maximum discharge, 4,800 cfs about Nov. 27, 1949 (gage height, 9.66 ft, from high-water mark), from rating curve extended above 2,400 cfs on basis of slope-area determination of peak flow; minimum recorded, 1.6 cfs July 23, 1949 (gage height, 2.15 ft).

Remarks.--Entire flow of river normally diverted at Cushman Dam No. 2, 7 miles upstream, to supply powerplant which discharges directly into sea (Hood Canal). Flow regulated by Lake Cushman reservoir (see p. 72) and by pondage in Cushman Reservoir No. 2. Flow at station includes infrequent releases and spillage from dams above station.

NISQUALLY RIVER BASIN

112. Nisqually River at La Grande, Wash.1/

Location.--Lat $46^{\circ}50'30''$, long. $122^{\circ}19'35''$ (revised), in SE $\frac{1}{4}$ sec. 29, T. 16 N., R. 4 E., on right bank half a mile downstream from city of Tacoma powerplant, half a mile northwest of La Grande, and three-quarters of a mile upstream from Mashed River.

Drainage area.--292 sq mi (revised). At sites 1906-11 and 1919-31, 286 sq mi (revised).

Gage.--Water-stage recorder. Altitude of gage is 490 ft (from river-profile map). Prior to Mar. 9, 1945, staff gages or water-stage recorders at several sites within 4 miles of present site, at different datums.

Average discharge.--24 years (1906-11, 1919-31, 1943-50), 1,307 cfs.

Extremes.--1906-11, 1919-31, 1943-50: Maximum discharge, 19,500 cfs Dec. 12, 1921; practically no flow at times as result of regulation.

Remarks.--Records in this report for October 1919 to September 1931 include flow of Tacoma power conduit (see preceding page) which, for this period, diverted above the station and was returned to river below station. Flow regulated by Alder Reservoir at Alder since November 1944 and by La Grande Reservoir at La Grande since February 1945.

* Revised.

135. Mud Mountain Reservoir near Buckley, Wash.

Location (revised).--Lat 47°08'30", long. 121°55'50", in NE¹ sec. 17, T. 19 N., R. 7 E., on left bank of reservoir just upstream from Mud Mountain Dam on White River, 5 miles southeast of Buckley, and 6 miles downstream from Clearwater River.

Drainage area.--400 sq mi.

Gage.--Staff gage. Datum of gage is at mean sea level (levels by Corps of Engineers).

Extremes.--1943-50: Maximum contents observed, 17,640 acre-ft June 18, 1950 (elevation, 1,070.8 ft); no pool at times most years.

Remarks.--Reservoir is formed by earth-fill dam, and is used for flood control. Dam was completed and storage began in 1942. Capacity, 106,000 acre-ft between elevation 895 ft (invert of outlet tunnel), and elevation, 1,215 ft (spillway crest). Storage is released after each flood without creating damaging flows downstream.

Cooperation.--Records collected and prepared in cooperation with Corps of Engineers.

Contents, in acre-feet, on last day of month, of Mud Mountain Reservoir near Buckley, Wash.

136. White River near Buckley, Wash.

Location.--Lat 47°09'05", long. 121°57'00", in SW¹NW⁴ sec. 8, T. 19 N., R. 7 E., on right bank 0.7 mile upstream from Red Creek, 1 mile downstream from Mud Mountain Dam, and 4 miles (revised) east of Buckley.

Drainage area.--401 sq mi (revised). At site prior to 1934, 400 sq mi.

Gage.--Water-stage recorder. Datum of gage is at mean sea level, datum of 1929 (Corps of Engineers' benchmark). Oct. 26, 1928, to Nov. 30, 1933, water-stage recorder 3 miles upstream at different datum. Nov. 26, 1938, to Feb. 14, 1939, staff gage at present site and datum.

Average discharge.--17 years (1928-33, 1938-50), 1,362 cfs.

Extremes.--1928-33, 1938-50: Maximum discharge, 17,000 cfs Feb. 26, 1932 (gage height, 17.5 ft, site and datum then in use), from rating curve extended above 4,000 cfs; minimum, 10 cfs Sept. 26, 1948 (elevation, 796.92 ft); minimum daily, 72 cfs Oct. 13, 1942. Maximum stage known, 23.4 ft in December 1933, from floodmarks, at former site (discharge, 28,000 cfs, from rating curve extended above 3,000 cfs).

Remarks.--No diversion. Flow regulated by Mud Mountain Reservoir for flood control since 1942 (see above). Storage is not retained and observed annual runoff closely represents natural runoff of basin.

137. White River flume near Buckley, Wash.

Location (revised).--Lat 47°10'10", long. 122°00'20", in NW¹ sec. 2, T. 19 N., R. 6 E., on right bank 800 ft downstream from intake, half a mile upstream from Northern Pacific Railway bridge, and 1 mile northeast of Buckley.

Gage.--Water-stage recorder. Datum of gage is 660.78 ft above mean sea level (levels by Puget Sound Power & Light Co.).

Average discharge.--25 years (1913-38), 780 cfs.

Extremes.--1913-38: Maximum discharge not determined; no flow in flume when headgates are closed.

Remarks.--Flume diverts water from left bank of White River in NE¹ sec. 2, T. 19 N., R. 5 E. (revised). Flow is stored in Lake Tapps until returned to Stuck River (lower White River) after being used for power development at Dieringer.

Cooperation.--Records for 1925-38, not previously published by Geological Survey, furnished by Puget Sound Power & Light Co.

138. Boise Creek near Enumclaw, Wash.

Location (revised).--Lat $47^{\circ}11'20''$, long. $121^{\circ}58'20''$, in SW $\frac{1}{4}$ sec. 30, T. 20 N., R. 7 E., on right bank $1\frac{1}{2}$ miles southeast of Enumclaw and 3 miles upstream from mouth.

Drainage area.--9.58 sq mi.

Gage.--Water-stage recorder. Altitude of gage is 740 ft (from topographic map).

Extremes.--1945-46: Maximum discharge, 306 cfs Dec. 28, 1945 (gage height, 3.68 ft); minimum, 1.6 cfs July 29, Aug. 30, 1945 (gage height, 0.59 ft).

Remarks.--Diversions for industrial and domestic use above station. Flow supplemented by water diverted from Scatter Creek during low-water periods. Partly regulated by mill-pond 3 miles above station.

139. White River at Buckley, Wash.

Location (revised).--Lat $47^{\circ}10'30''$, long. $122^{\circ}01'10''$, in SE $\frac{1}{4}$ sec. 34, T. 20 N., R. 6 E., on left bank 40 ft downstream from Northern Pacific Railway bridge and 1 mile northeast of Buckley.

Drainage area.--427 sq mi (revised). At site 1899-1903, 415 sq mi (revised), excluding Boise Creek.

Supplemental records available.--January 1902 to August 1903, gage heights only.

Gage.--Water-stage recorder. Datum of gage is at mean sea level (levels by Puget Sound Power & Light Co.). Apr. 22, 1899, to Aug. 31, 1903, wire-weight gage 550 ft upstream at different datum. June 8, 1910, to Nov. 30, 1911, staff gage 50 ft upstream at datum 624.92 ft above mean sea level (Stone & Webster Engineering Corp. benchmark); record supplemented by staff-gage readings at site 5 miles upstream.

Average discharge.--23 years (1899-1901, 1910-11, 1913-28, 1933-38), 1,591 cfs.

Extremes.--1899-1901, 1910-11, 1913-28, 1933-38: Not determined.

Remarks.--Records since February 1913 include flow of White River flume (see preceding page) which diverts from left bank in NE $\frac{1}{4}$ sec. 2, T. 19 N., R. 5 E., half a mile upstream and carries an average flow of 780 cfs.

Cooperation.--Records collected by Puget Sound Power & Light Co. under general supervision of the Geological Survey, 1913-23. Complete record furnished by power company thereafter.

142. Puyallup River at Puyallup, Wash.

Location (revised).--Lat 47°12'30", long. 122°19'35", in NW¹ sec. 20, T. 20 N., R. 4 E., on left bank 0.8 mile upstream from highway bridge and Clark Creek, 1 mile northwest of Puyallup, and 7 miles upstream from mouth.

Drainage area.--948 sq mi.

Gage.--Water-stage recorder. Datum of gage is at mean sea level, datum of 1929. Prior to Dec. 3, 1919, at sites 1½ miles upstream and 900 ft upstream at different datums. Dec. 3, 1919, to Nov. 9, 1935, at site 500 ft upstream at datum 9.61 ft higher.

Average discharge.--36 years (1914-50), 3,254 cfs (unadjusted).

Extremes.--1914-50: Maximum discharge, 57,000 cfs Dec. 10, 1933 (gage height, 31.0 ft, present datum); minimum, probably less than 350 cfs Nov. 24, 28, Dec. 1, 3-5, 1929.

Remarks.--All diverted water returned to river above station. Large part of flow of White River diverted by White River flume into Lake Tapps (see p. 121) and returned via Stuck River above station. Flood flow on White River regulated since 1942 by Mud Mountain Reservoir (see p. 119). Minor pondage on tributaries and upper Puyallup River.

Monthly and yearly mean discharge, in cubic feet per second

172. Cedar River near Landsburg, Wash. 1/

Location (revised).--Lat 47°23'35", long. 121°56'50", in NE^{1/4}SW^{1/4} sec. 17, T. 22 N., R. 7 E., on left bank 2 miles upstream from Seattle municipal water-supply intake at Landsburg, 4 $\frac{1}{4}$ miles east of Maple Valley, 5 miles downstream from Taylor Creek, and 12 miles downstream from Cedar Lake.

Drainage area (revised).--125 sq mi, excludes that of Rock Creek. At site 1895-1900, 140 sq mi; at Seattle municipal water-supply intake 1901-13, 139 sq mi; at site 1914-28, 135 sq mi; at present site 1928-32, 134 sq mi, includes that of Rock Creek.

Gage.--Water-stage recorder. Altitude of gage is 600 ft (from river-profile map). July 25, 1895, to Sept. 30, 1898, staff gage 2 $\frac{1}{2}$ miles downstream at different datum. Mar. 24, 1901, to May 15, 1913, staff gage 2 miles downstream at datum of 535.84 ft above mean sea level (levels by city of Seattle). Apr. 30, 1914, to Oct. 22, 1928, water-stage recorder a quarter of a mile downstream from present site at different datum.

Average discharge.--55 years (1895-1950), 686 cfs.

Extremes.--1895-98, 1901-50: Maximum discharge, 14,200 cfs (revised) Nov. 19, 1911 (gage height, 10.0 ft, from graph based on gage readings, site and datum then in use), caused by failure of flashboards at Cedar Lake; minimum observed, 83 cfs Sept. 19, 1898.

Remarks.--Records include flow of Seattle municipal water-supply 1901-13 and Rock Creek 1895-1931. Rock Creek (see p. 148), a tributary which entered just above present gage prior to 1932, has been diverted to enter river at a point 2 miles downstream from Seattle municipal water-supply intake to lessen danger of pollution. Some regulation by Cedar Lake, 12 miles above station, since Oct. 14, 1904.

198. South Fork Skykomish River near Index, Wash.

Location.--Lat 47°48'20", long. 121°32'40", in NE₁ sec. 29, T. 27 N., R. 10 E., on right bank 600 ft upstream from Sunset Falls, 1 mile (revised) southeast of Index, and 2 miles upstream from North Fork. Discharge measurements made about 2 miles upstream from gage.

Drainage area--355 sq mi.

Gage.--Water-stage recorder. Datum of gage is 574.80 ft above mean sea level, datum of 1929, supplementary adjustment of 1947. Prior to Mar. 15, 1934, staff gages and water-stage recorder about 300 ft downstream as follows: Oct. 6, 1902, to Sept. 30, 1905, staff gage at datum 0.39 ft higher and Apr. 26, 1911, to Sept. 30, 1913, at datum 1 ft higher; Oct. 1, 1913, to Sept. 13, 1920, staff gage, Sept. 14, 1920, to Oct. 1, 1921, water-stage recorder, and Jan. 23, 1922, to Mar. 14, 1934, staff gage, at present datum.

Average discharge.--42 years (1902-5, 1911-50), 2,346 cfs (corrected).

Extremes.--1902-5, 1911-50: Maximum discharge, 55,000 cfs (revised) Dec. 12, 1921 (revised) (gage height, 22.8 ft, revised, from high-water marks at site then in use), from rating curve extended above 14,000 cfs by logarithmic plotting; minimum observed, 214 cfs Oct. 15-21, 1923, 1925.

Flood of 1897 reached a stage of about 5 ft higher than that of Dec. 12, 1921 (discharge, about 70,000 cfs).

Remarks.--No diversion or regulation above station.

* Revised.

† Not previously published.

199. Troublesome Creek near Index, Wash.

Location.--Lat $47^{\circ}54'00''$, long $121^{\circ}23'40''$ (revised), in NE₄ sec. 21, T. 28 N., R. 11 E. (unsurveyed), on right bank a quarter of a mile upstream from mouth and 9 miles north-east of Index.

Records represent flow passing measuring section 1 $\frac{1}{4}$ miles upstream.

Drainage area.--10.6 sq mi (revised) at measuring section.

Gage.--Water-stage recorder. Altitude of gage is 1,350 ft (from topographic map).

Average discharge.--12 years (1929-41), 114 cfs.

Extremes.--1929-41: Maximum discharge, 2,300 cfs Dec. 21, 1933 (gage height, 7.0 ft), from rating curve extended above 750 cfs; maximum gage height, 7.54 ft Feb. 26, 1932; minimum discharge, 10 cfs Nov. 17, 18, 19, 1936.

Remarks.--No diversion or regulation above station.

200. North Fork Skykomish River at Index, Wash.

Location.--Lat 47°49'10" N., long. 121°33'10" W., in NW₁ sec. 20, T. 27 N., R. 10 E., on highway bridge at Index 1½ miles upstream from mouth.

Drainage area.--149 sq mi.

Gage.--Wire-weight gage. Altitude of gage is 525 ft (from river-profile map). Aug. 24, 1910, to Sept. 30, 1932, staff or chain gages at several sites within 1,600 ft of described site at different datums. Feb. 19, 1929, to Sept. 8, 1930, chain gage at described site and datum.

Average discharge.--23 years (1910-22, 1929-38, 1946-48), 1,210 cfs.

Extremes.--1910-22, 1929-38, 1946-48: Maximum discharge observed, 28,400 cfs (revised) Dec. 21, 1933 (gage height, 10.7 ft, from graph based on gage readings), from rating curve extended above 6,200 cfs on basis of proportioned peak flow of Skykomish River near Gold Bar and logarithmic plotting; probably higher Dec. 12, 1921 when gage washed out; minimum observed, 78 cfs Sept. 25, 1930.

Remarks.--No diversion or regulation above station.

208. Sultan River near Sultan, Wash.

Location.--Lat $47^{\circ}55'40''$, long. $121^{\circ}47'50''$ (revised), in E $\frac{1}{2}$ sec. 8, T. 28 N., R. 8 E., on left bank at head of Horseshoe Bend, a quarter of a mile downstream from Miners Creek, $4\frac{1}{2}$ miles north of Sultan, and 6 miles upstream from mouth.

Drainage area.--88 sq mi, approximately.

Gage.--Water-stage recorder. Altitude of gage is 420 ft (from river-profile map). Prior to Oct. 29, 1915, at Camp Habecker, $1\frac{1}{2}$ miles upstream at different datum.

Average discharge.--17 years (1911-26, 1929-31), 780 cfs.

Extremes.--1911-26, 1929-31: Maximum discharge, 24,600 cfs Dec. 12, 1921 (gage height, 18.5 ft, from high-water mark in well), from rating curve extended above 16,000 cfs; minimum, 2.7 cfs Aug. 25, 1931, result of diversion.

Remarks.--City of Everett diverted water 2 miles above gage, in varying amounts from 3 cfs in 1916 to possibly 80 cfs in 1931, for municipal use; practically entire flow diverted July to September 1931. No regulation prior to October 1930. Possible slight regulation thereafter by sluicing at diversion dam.

221. Snoqualmie River near Snoqualmie, Wash.¹

Location.--Lat 47°32'45", long. 121°50'35", in SW₁SW₁ sec. 19, T. 24 N., R. 8 E., on left bank an eighth of a mile downstream from Snoqualmie Falls, half a mile upstream from Tokul Creek, and 1½ miles northwest of Snoqualmie.

Drainage area.--375 sq mi (revised).

Supplemental records available.--October 1904 to September 1905, and November to December 1906, gage heights only.

Gage.--Water-stage recorder. Altitude of gage is 120 ft (from river-profile map). Prior to Nov. 3, 1902, and Nov. 1 to Dec. 31, 1906, staff gages above and below Snoqualmie Falls at different datums. Nov. 3, 1902, to Sept. 30, 1905, staff gage at site 4 miles upstream and 300 ft downstream from South Fork at different datum.

Average discharge.--28 years (1898-99, 1902-4, 1907-32), 2,488 cfs.

Extremes.--1898-1900, 1902-4, 1926-27: Maximum discharge (revised), 24,400 cfs Jan. 3, 1903 (gage height 19.6 ft, from floodmarks, site and datum then in use); minimum recorded (revised), 320 cfs July 8, 1926.

Remarks.--No diversion above station. After 1900, low-flow records collected below Snoqualmie Falls are affected by powerplant operation. Records August 1907 to May 1926 and March 1929 to September 1932 are the sum of flow in North, Middle and South Forks (see elsewhere in this report).

222. Tokul Creek near Snoqualmie, Wash.

Location.--Lat 47°33'20", long. 121°50'15", in NW₁ sec. 19, T. 24 N., R. 8 E., on right bank 50 ft downstream from highway bridge, half a mile upstream from mouth, and 1½ miles north of Snoqualmie.

Drainage area.--34 sq mi (revised), approximately. At site 1907-14, 33 sq mi, approximately.

Gage.--Water-stage recorder. Altitude of gage is 180 ft (from river-profile map). July 21, 1907, to Oct. 31, 1914, staff gage 1 mile upstream at datum about 340 ft higher. Mar. 20, 1929, to Sept. 30, 1931, staff gage three-eighths of a mile downstream from described site at different datum.

Average discharge.--8 years (1908-14, 1929-31), 103 cfs.

Extremes.--1907-14, 1929-31, 1945: Maximum discharge not determined, probably occurred during period Nov. 19-29, 1909 when water was over gage; minimum, 13 cfs Sept. 16-20, 1909.

Remarks.--Some diversion for industrial use and municipal supply of community of Snoqualmie Falls above station. No regulation.

Location (revised).--Lat 47°54'40", long. 122°05'50", in SE₁ sec. 13, T. 28 N., R. 5 E., on downstream end of drawrest of bridge No. 205 on State Highway 1A in Snohomish.

Drainage area.--1,720 sq mi (revised), approximately.

Gage.--Water-stage recorder. Datum of gage is 10 ft below mean sea level, datum of 1929. Auxiliary water-stage recorder, 2½ miles downstream from base gage.

Extremes.--1941-50: Maximum discharge (revised), 70,000 cfs Dec. 15, 1946, obtained from auxiliary gage height and stage-fall relation curve for period of no base gage-height record; maximum gage height recorded, 27.5 ft Nov. 27, 1949.

Maximum stage known, 35 ft at base gage and 31 ft at auxiliary gage in 1906, from flood profile furnished by Corps of Engineers.

Remarks.--Station operated for flood flows only; discharges below 10,000 cfs not generally computed. Large diurnal fluctuation because of tides; discharge computed by using fall as factor. No appreciable regulation or diversion at stages for which discharges are published.

275. Skagit River below Ruby Creek, near Newhalem, Wash.1/

Location--Lat 48°44'20", long. 121°03'40", in SE₄ sec. 35, T. 38 N., R. 13 E. (unsurveyed), on right bank three-quarters of a mile downstream from Ruby Creek, 9 miles northeast of Newhalem, and 23 miles northeast of Marblemount.

Drainage area--978 sq mi, of which 400 sq mi is in Canada.

Supplemental records available--Monthly mean discharge only for October 1908 to May 1919, and October 1930 to September 1933 are contained in State of Washington Water-Supply Bulletin No. 5.

Gage--Water-stage recorder. Altitude of gage is 1,190 ft (from river-profile map).

Average discharge--11 years (1919-30), 3,111 cfs.

Extremes--1919-30: Maximum discharge, 45,700 cfs Dec. 12, 1921 (gage height, 16.1 ft), from rating curve extended above 11,000 cfs on basis of discharge at gage heights 9.8, 10.1 and 11.9 ft, determined by subtracting Thunder Creek and miscellaneous inflow from Skagit River at Reflector Bar near Newhalem; minimum recorded, 390 cfs Dec. 11, 12, 1929, probably less during period of no gage-height record during that winter.

Remarks--No diversion or regulation above station.

276. Ross Reservoir near Newhalem, Wash.^{1/}

Location.--Lat 48°44'00", long. 121°04'10", in SE₁ sec. 35, T. 38 N., R. 13 E., at Ross Dam on Skagit River, 1 mile downstream from Ruby Creek, and 9 miles northeast of Newhalem.

Drainage area.--980 sq mi, approximately.

Gage.--Water-stage recorder. Datum of gage is at mean sea level (city of Seattle benchmark). Prior to Sept. 24, 1940, staff gage, and Sept. 24, 1940, to June 27, 1943, water-stage recorder at same site and datum. June 28, 1943, to Apr. 29, 1948, staff gage 500 ft upstream at same datum.

Extremes.--1940-50: Maximum contents, 1,214,000 acre-ft July 10, 1950 (elevation, 1,582.88 ft); minimum since storage began, not determined.

* Remarks.--Reservoir is formed by concrete arch dam completed to elevation 1,615 ft in 1949; storage began Mar. 11, 1940. Capacity 1,202,920 acre-ft between elevations 1,250 ft (lowest outlet) and 1,582 ft (spillway crest). Dead storage is negligible. Water used to supplement low flow of Skagit River through Diablo and Newhalem powerplant.

277. Thunder Creek near Newhalem, Wash.^{2/}

Location.--Lat 48°40'20", long. 121°04'20", in SE₁ sec. 23, T. 37 N., R. 13 E., (unsurveyed), on right bank half a mile upstream from backwater from Diablo Reservoir, 8 miles east of Newhalem, and 20 miles northeast of Marblemount.

Drainage area.--98 sq mi, approximately.

Gage.--Water-stage recorder. Altitude of gage is 1,220 ft (from river-profile map).

Average discharge.--20 years (1930-50), 606 cfs.

Extremes.--1920-50: Maximum discharge, 9,630 cfs (revised) Nov. 27, 1949 (gage height, 12.14 ft), from rating curve extended above 2,900 cfs on basis of logarithmic plotting; minimum not determined, probably less than 50 cfs during period of ice effect or no gage-height record in February 1936.

Remarks.--No diversion or regulation above station.

278. Thunder Creek near Marblemount, Wash.

Location.--Lat $48^{\circ}42'30''$, long. $121^{\circ}06'00''$, in NW₁ sec. 10, T. 37 N., R. 13 E., on left bank a quarter of a mile upstream from mouth, $1\frac{1}{2}$ miles southeast of Diablo Dam, and 20 miles northeast of Marblemount.

Drainage area.--111 sq mi.

Gage.--Water-stage recorder. Altitude of gage is 1,085 ft (by water level transfer from Diablo Dam).

Average discharge.--11 years (1919-30), 651 cfs.

Extremes.--1919-30: Maximum discharge, 15,400 cfs (revised) Dec. 12, 1921 (gage height, 15.5 ft); minimum discharge not determined, but probably occurred during period Jan. 19 to Feb. 15, 1929, when stage-discharge relation was affected by ice.

Remarks.--No diversion or regulation above station.

282. Skagit River at Newhalem, Wash.^{1/}

Location (revised).--Lat 48°40'20", long. 121°14'45", in SE¹ sec. 21, T. 37 N., R. 12 E., on right bank a quarter of a mile upstream from Newhalem Creek, half a mile downstream from city of Seattle powerplant at Newhalem, 11 miles upstream from Bacon Creek, and 13 miles northeast of Marblemount.

Drainage area.--1,160 sq mi, approximately, of which 400 sq mi is in Canada.

Supplemental records available.--Monthly discharges only, June 1914 to September 1920, are contained in Washington State Water-Supply Bulletin No. 5.

Gage.--Water-stage recorder. Datum of gage is 401.5 ft above mean sea level (river-profile survey). Dec. 21, 1908, to May 23, 1914, staff gages half a mile upstream at datum 91 ft higher. Nov. 15, 1920, to June 4, 1923, staff gage 500 ft upstream at present datum.

Average discharge.--35 years (1908-13, 1920-50), 4,257 cfs (unadjusted); 4,303 cfs (adjusted for storage since October 1929).

Extremes.--1908-14, 1920-50: Maximum discharge, 63,500 cfs Nov. 29, 1909 (gage height, 22.0 ft, from floodmark, site and datum then in use); minimum, 54 cfs Nov. 1, 1943 (gage height, 78.15 ft); minimum daily, 136 cfs Aug. 24, 1930.

Several large floods occurred prior to 1909. See Skagit River at Reflector Bar, near Newhalem (p.226) for which peaks are practically equivalent to those at this station.

Remarks.--Flow regulated for power by Gorge Dam since August 1924, by Diablo Reservoir since October 1929 and by Ross Reservoir since March 1940 (see elsewhere in this report).

308. Baker River at Concrete, Wash.

Location.--Lat 48°32'35", long. 121°44'35", on line between secs. 10 and 11 (revised), T. 35 N., R. 8 E., on left bank 800 ft downstream from Baker River powerplant, a quarter of a mile northeast of Concrete, and three-quarters of a mile upstream from mouth.

Drainage area.--297 sq mi (revised).

Gage.--Water-stage recorder. Datum of gage is 172.6 ft above mean sea level (from river-profile survey). Sept. 11, 1910, to Mar. 4, 1915, staff gage half a mile downstream at different datum.

Average discharge.--11 years (1910-14, 1943-50), 2,512 cfs (unadjusted), 2,513 cfs (revised), adjusted for storage since November 1925.

Extremes.--1910-15, 1943-50: Maximum discharge, 35,200 cfs Nov. 27, 1949 (gage height, 20.32 ft, from high-water mark), from rating curve extended above 16,000 cfs on the basis of computation of peak flow over dam; minimum, 21 cfs Feb. 7, 1949 (gage height, 0.20 ft); minimum daily, 142 cfs Jan. 1, 1949.

Remarks.--Flow regulated since November 1925 by Baker River powerplant and Lake Shannon (see above).

Monthly and yearly mean discharge, in cubic feet per second, of Baker River at Concrete, Wash.

309. Skagit River near Concrete, Wash.

Location (revised).--Lat 48°31'30", long. 121°46'10", in NE¹ sec. 16, T. 35 N., R. 8 E., on right bank at The Dalles, 1½ miles southwest of Concrete, and 2½ miles downstream from Baker River.

Drainage area.--2,700 sq mi, approximately, of which 400 sq mi is in Canada.

Gage.--Water-stage recorder. Datum of gage is 130.0 ft above mean sea level, datum of 1929. Prior to Dec. 10, 1924, staff gage 200 ft upstream at datum 12.69 ft higher; Dec. 10, 1924, to Oct. 28, 1937, water-stage recorder at datum 12.69 ft higher.

Average discharge.--26 years (1924-50), 14,230 cfs (unadjusted).

Extremes.--1924-50: Maximum discharge, 154,000 cfs Nov. 27, 1949 (gage height, 40.8 ft); minimum, probably less than 2,160 cfs during period Oct. 1-24, 1925 when recorder was not operating and gates in Baker River Dam were first closed; minimum daily recorded, 2,610 cfs Nov. 14, 1936.

Maximum stage known, 69.3 ft, present datum, about 1815, from floodmarks at site 200 ft upstream (discharge, about 500,000 cfs).

Remarks.--No diversion. Flow partly regulated by powerplants on Baker and upper Skagit Rivers and by Ross, Diablo, and Lake Shannon Reservoirs (see elsewhere in this report).

327. Whatcom Creek below hatchery, near Bellingham, Wash.

Location.--Lat $48^{\circ}45'10''$, long. $122^{\circ}25'40''$, in NW_{1/4} SW_{1/4} sec. 28, T. 38 N., R. 3 E., on right bank in Whatcom Falls Park, seven-eighths of a mile downstream from Lake Whatcom, and 2 miles east of Bellingham.

Drainage area.--55.5 sq mi (revised).

Gage.--Water-stage recorder. Datum of gage is 252.55 ft above mean sea level (city of Bellingham benchmark).

Average discharge.--5 years (1945-50), 109 cfs (unadjusted).

Extremes.--1945-50: Maximum discharge, 1,350 cfs probably Dec. 29, 1949 (gage height, 6.0 ft, from recorded range in stage); minimum, 2.5 cfs Oct. 14, 21, 1946.

Remarks.--Flow completely regulated by Lake Whatcom (usable capacity, about 28,800 acre-ft under normal operating conditions). City of Bellingham diverts about 30 cfs from this lake for municipal use. Records include return flow from fish hatchery which diverts water 1,000 ft upstream.

342. Fishtrap Creek at Lynden, Wash.

Location.--Lat $48^{\circ}57'50''$, long. $122^{\circ}26'00''$, on north line sec. 16, T. 40 N., R. 3 E., on right bank at downstream side of bridge on State Highway 1A, 1 mile north of Lynden.

Drainage area.--24.1 sq mi, of which 18.5 sq mi is in Canada.

Gage--Water-stage recorder. Altitude of gage is 110 ft (from topographic map).

Extremes.--1948-50: Maximum discharge, 342 cfs Dec. 28, 1949 (gage height, 5.40 ft, from recorded range in stage); minimum, 0.4 cfs Sept. 10, 1949 (gage height, 1.00 ft, with -0.13 ft shift).

Remarks.--Probably some small diversion for minor irrigation and domestic use above station. No regulation. Large part of flood flow bypasses gage through sloughs.

Location.--Lat 48°24'00", long. 115°33'10", in SE_{1/4} SW_{1/4} sec. 34, T. 31 N., R. 31 W., on right bank 1,800 ft downstream from highway bridge at Libby and 1 mile downstream from Libby Creek.

Drainage area.--10,240 sq mi.

Gage.--Water-stage recorder. Datum of gage is 2,041.54 ft above mean sea level, datum of T1929, supplementary adjustment of 1947. Prior to Apr. 28, 1931, staff, chain, and wire-weight gages 1,800 ft upstream at different datum.

Average discharge.--40 years (1910-50), 11,490 cfs.

Extremes.--1910-50: Maximum discharge, 121,000 cfs (revised) June 21, 1916 (gage height, 20.7 ft, present datum); minimum, 895 cfs Jan. 11, 1930, discharge measurement (stage-discharge relation affected by ice).

Remarks.--Diversion for irrigation of about 4,200 acres from tributaries above station.

Monthly and yearly mean discharge, in cubic feet per second

354. Lake Creek at Troy, Mont.

Location.--Lat 48°26'40", long. 115°52'30", in SW_{1/4} sec. 18, T. 31 N., R. 33 W., on right bank a quarter of a mile downstream from power plant, half a mile upstream from mouth, and 1 $\frac{1}{4}$ miles southeast of Troy.

Drainage area.--210 sq mi (revised).

Gage.--Water-stage recorder. Altitude of gage is 1,900 ft (from topographic map). Prior to Nov. 1, 1946, wire-weight gage a quarter of a mile upstream at different datum.

Average discharge.--5 years (1945-50), 534 cfs.

Extremes.--1945-50: Maximum discharge, 3,250 cfs May 30, 1948 (gage height, 8.28 ft); minimum 2.0 cfs (regulated) Sept. 1, 1947, Sept. 15, 1948; minimum daily, 65 cfs Jan. 26 to Feb. 7, 1949.

Remarks.--Some regulation by small dam at power-plant diversion; water diverted returns to stream at power plant above station. Natural regulation by Bull and Spar Lakes.

362. Kootenai River at Boom Camp, near Bonners Ferry, Idaho

Location.--Lat $48^{\circ}42'05''$, long. $116^{\circ}14'30''$, in NW $\frac{1}{4}$ sec. 29, T. 62 N., R. 2 E., on left bank 600 ft east of Boom Camp, $3\frac{1}{2}$ miles upstream from Bonners Ferry, and 4 miles downstream from Moyie River.

Drainage area.--12,950 sq mi, approximately.

Gage.--Water-stage recorder. Datum of gage is 1,700.00 ft above mean sea level, adjustment of 1929; gage readings have been reduced to elevations above mean sea level. Prior to Aug. 23, 1934, staff gage at datum 54.08 ft higher.

Extremes.--1927-50: Maximum elevation recorded, 1,779.87 ft May 28, 1948; minimum elevation, 1,755.53 ft Dec. 9, 1936.

Remarks.--Elevations affected by backwater from Kootenay Lake during high lake stages and occasionally by dike failure below station during floods. Maximum yearly elevations are shown with those for Kootenai River at Porthill, elsewhere in this report.

364. Kootenai River at Bonners Ferry, Idaho

Location.--Lat $48^{\circ}42'00''$, long. $116^{\circ}18'45''$, in NE $\frac{1}{4}$ sec. 27, T. 62 N., R. 1 E., on highway bridge at Bonners Ferry.

Drainage area.--13,000 sq mi, approximately.

Supplemental records available.--Gage-height records collected at same sites Oct. 16, 1904, to Sept. 30, 1926, are contained in reports of U. S. Weather Bureau.

Gage.--Wire-weight or chain gages. Datum of gage is 1,743.00 ft above mean sea level (U. S. Coast & Geodetic Survey datum); gage readings have been reduced to elevations above mean sea level. May 1, 1904, to Aug. 16, 1910, staff or chain gages three-quarters of a mile downstream at datum 2.75 ft higher. Aug. 17, 1910, to Nov. 30, 1929, staff gage 800 ft across channel from present site at datum 2.74 ft higher.

After May 8, 1942, water-stage recorder on left bank, at present datum, used as supplemental gage during high stages.

Average discharge.--22 years (1928-50) 13,830 cfs.

Extremes.--1927-50: Maximum discharge, 139,000 cfs May 27, 1948 (affected by dike breakage downstream); maximum elevation, 1,778.32 ft May 28, 1948; minimum daily discharge, 1,300 cfs Feb. 8, 1936; minimum elevation, 1,741.14 ft Dec. 5, 1929, Dec. 29, 1930.

Flood of June 1894 reached a stage of 1,777.2 ft.

Remarks.--No diversion or regulation above station. Elevations and discharge affected by failure of dikes above and below the station at high stages some years. Station in backwater from Kootenay Lake except at times of extreme low lake stages. A listing of maximum yearly elevations will be found with record for station Kootenai River at Porthill (see p. 308).

Cooperation.--Gage heights Oct. 1, 1926, to Sept. 30, 1927, furnished by U. S. Weather Bureau.

366. Deep Creek at Moravia, Idaho

Location.--Lat 48°38', long. 116°24', in sec. 18, T. 61 N., R. 1 E., on downstream right abutment of concrete highway bridge, 1 mile downstream from Ruby Creek and 1 mile southwest of Moravia.

Drainage area.--133 sq mi.

Gage.--Staff gage. Altitude of gage is 1,800 ft (from topographic map).

Average discharge.--22 years (1928-50), 129 cfs.

Extremes.--1928-50: Maximum discharge observed, 1,500 cfs May 15, 1950; maximum gage height observed, 4.46 ft May 6, 1945, datum then in use; minimum discharge observed, 5 cfs Aug. 14, 22, 1940.

Remarks.--A few small diversions for irrigation above station. Occasional regulation above station at migratory waterfowl refuge near Elmira.

Yearly discharge, in cubic feet per second

376. Kootenai River near Copeland, Idaho ^{1/}
(International gaging station)

Location.--Lat $48^{\circ}54'45''$, long. $116^{\circ}25'00''$, in NW₁ NW₁ sec. 12, T. 64 N., R. 1 W., on left bank at Andrews Ranch, three-quarters of a mile downstream from Mission Creek and $\frac{1}{2}$ miles northwest of Copeland.

Drainage area.--13,400 sq mi, approximately.

Supplemental records available.--Gage-height records collected at same site for the period Apr. 1, 1925, to Sept. 30, 1927, are contained in reports of Dominion Water Power and Reclamation Service of Canada.

gage.--Water-stage recorder. Datum of gage is 1,700.00 ft above mean sea level, (adjustment of 1929); gage heights have been reduced to elevations above mean sea level. Oct. 1, 1927, to Nov. 19, 1929, staff gage or water-stage recorder at mouth of Mission Creek, three-quarters of a mile upstream at datum 0.2 ft higher.

Average discharge.--21 years (1929-50), 14,390 cfs.

Extremes.--1929-50: Maximum daily discharge, 124,000 cfs May 30, 1948; maximum elevation, 1,770.10 ft May 31, 1948; minimum daily discharge, 1,350 cfs Feb. 8, 1936; minimum elevation, 1,738.52 ft Apr. 2, 3, 1944.

Remarks.--Stage-discharge relation affected by backwater from Kootenay Lake. Elevations affected occasionally by dike failure during floods. Records of maximum yearly elevation are shown with those for Kootenai River at Porthill, elsewhere in this report.

COLUMBIA RIVER MAIN STEM

382. Columbia River at Birchbank, British Columbia 1/
(International gaging station)

Location--Lat 49°10', long. 117°43', on right bank at Birchbank, British Columbia, 7 miles upstream from Trail, 11 miles downstream from Kootenai River, and 17 miles upstream from international boundary.

Drainage area--34,000 sq mi, approximately.

Gage--Water-stage recorder. Datum of gage is 1,329.90 ft above mean sea level, (levels by Geodetic Survey of Canada 1947 International joint adjustment). Prior to Oct. 1, 1937, chain or wire-weight gage 7 miles downstream at datum 1,313.63 ft above mean sea level.

Average discharge--37 years (1913-50), 69,250 cfs.

Extremes--1913-50: Maximum discharge, 370,000 cfs June 11, 1948 (gage height, 50.62 ft); minimum, 8,940 cfs Feb. 3, 1937 (gage height, 6.27 ft, site and datum then in use).

Remarks--Flow partly regulated by Kootenay Lake, controlled by order of International Joint Commission (between legal limits of 1,739.32 ft and 1,747.32 ft, capacity is 909,000 acre-ft). Many small diversions for irrigation of about 25,000 acres above station.

Cooperation--This station is one of the international gaging stations maintained by Canada under agreement with the United States. Prior to 1930 records furnished by Dominion Water and Power Bureau of Canada.

1/ Published as Columbia River at Trail, British Columbia prior to Oct. 1, 1937.

395. Flint Creek near Maxville, Mont.

Location.--Lat 46°32'30", long. 113°14'00", in N $\frac{1}{2}$ NE $\frac{1}{4}$ sec. 21, T. 9 N., R. 13 W., on right bank 50 ft downstream from point of diversion of Allandale Canal and 4 miles north of Maxville.

Drainage area.--325 sq mi (revised).

Gage.--Wire-weight gage. Altitude of gage is 4,420 ft (from topographic map).

Extremes.--1946-49: Maximum discharge observed, 1,700 cfs June 4, 1948 (gage height, 6.39 ft) from rating curve extended above 140 cfs by logarithmic plotting; minimum observed, 24 cfs July 16, 1949 (gage height, 1.09 ft).

Remarks.--Diversions above station for irrigation of about 19,500 acres of which 9,500 acres are below station. During irrigation season flow is supplemented by water from East Fork Rock Creek which is diverted in sec. 5, T. 4 N., R. 14 W., 500 ft below East Fork Rock Creek Dam, through a canal into Trout Creek, thence into Flint Creek. Some regulation by Georgetown Lake (see p. 313).

405. Nevada Creek above reservoir, near Finn, Mont.

Location (revised).--Lat 46°47', long. 112°46', in NE_{1/4} sec. 19, T. 12 N., R. 9 W., on right bank 1 mile upstream from Buffalo Creek and 4 miles west of Finn.

Drainage area--128 sq mi.

Gage--Water-stage recorder. Altitude of gage is 4,710 ft (from topographic map). Prior to Apr. 30, 1942, wire-weight gage an eighth of a mile upstream at different datum.

Average discharge--11 years (1939-50), 33.0 cfs.

Extremes--1939-50: Maximum discharge, 1,440 cfs Apr. 16, 1948 (gage height, 6.04 ft), from rating curve extended above 350 cfs; maximum gage height, 6.09 ft Mar. 18, 1947 (ice jam); minimum discharge, probably less than 2 cfs at times in January and February 1944.

Remarks--Diversions for irrigation of about 2,500 acres above station.

416. Rattlesnake Creek at Missoula, Mont.

Location.--Lat $46^{\circ}52'20''$, long. $113^{\circ}59'00''$, in SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec. 22, T. 13 N., R. 19 W., on Ivy Street Bridge in Missoula.

Drainage area.--79.7 sq mi.

Supplemental records available.--January to November 1900, gage heights and discharge measurements only.

Gage.--Wire-weight gage. Altitude of gage is 3,220 ft (from topographic map).

Extremes.--June to December 1899: Maximum discharge observed, 2,050 cfs June 18 (gage height, 6.25 ft); minimum daily, 30 cfs Dec. 19 (revised).

Flood of June 6, 1948, reached a discharge of 2,400 cfs, by computation of peak flow over dam 4 miles upstream.

Remarks.--Diversion for municipal supply of Missoula; also, many small diversions for irrigation above station.

a Apr. 25, May 6, 1911.

442. Clark Fork at St. Regis, Mont.

Location--Lat 47°18'05", long. 115°05'15", in center of SW₁ sec. 19, T. 18 N., R. 27 W., on left bank at St. Regis and half a mile downstream from St. Regis River.

Drainage area--10,709 sq mi (revised).

Gage--Water-stage recorder. Altitude of gage is 2,600 ft (by barometer). Prior to Nov. 29, 1933, staff gage at same site and datum.

Average discharge--40 years (1910-50), 7,185 cfs.

Extremes--1910-50: Maximum discharge, 68,900 cfs May 24, 1948 (gage height, 19.96 ft); minimum recorded, 1,000 cfs Dec. 17, 1940 (gage height, 3.36 ft), but may have been less during period of ice effect Feb. 19-22, 1929.

Remarks--Diversions for irrigation of about 244,000 acres above station. Some diurnal fluctuation at low flows caused by powerplant at Bonner.

443. Flathead River at Flathead, British Columbia 1/

Location.--Lat 49°00'00", long. 114°29'00", on left bank at highway bridge, 0.2 mile north of international boundary, 0.2 mile northwest of Flathead, British Columbia, and 7 miles northwest of Trail Creek, Montana.

Drainage area.--450 sq mi, approximately.

Gage.--Water-stage recorder. Altitude of gage is 3,980 ft (from topographic map). Prior to Sept. 1, 1949, staff gage on center pier of bridge, at same site and datum.

Extremes.--1929-50: Maximum discharge observed, 14,600 cfs May 23, 1948 (gage height, 9.1 ft, from floodmark), from rating extended above 8,000 cfs; minimum observed, 65 cfs Apr. 9, 1929, but was probably less during periods of no record during winter.

Remarks.--No diversion above station.

Cooperation.--This station is one of the international gaging stations maintained by Canada under agreement with the United States.

a Maximum observed.

b From recorded range in stage.

458. Flathead River at Columbia Falls, Mont.

Location--Lat 48°21'50", long. 114°11'10", in NW₁ SE₁ (corrected) sec. 17, T. 30 N., R. 20 W., on right bank 200 ft downstream from county highway bridge at Columbia Falls and 5 miles downstream from South Fork.

Drainage area--4,464 sq mi (revised).

Supplemental records available--Records of chemical analyses and water temperatures for the period January 1949 to September 1950 are published in reports of the Geological Survey.

Gage--Water-stage recorder. Datum of gage is 2,978.00 ft above mean sea level, datum of 1929 (levels by Corps of Engineers). Prior to Nov. 12, 1928, wire-weight gage 200 ft upstream at datum 0.19 ft higher.

Average discharge--22 years (1928-50), 8,943 cfs.

Extremes--1922-23, 1928-50: Maximum discharge, 102,000 cfs May 23, 1948 (gage height, 19.08 ft); minimum, 798 cfs Dec. 8, 1929 (gage height, -0.08 ft).

Maximum stage known, 22.7 ft in June 1894, from floodmarks (discharge, 135,000 cfs from rating curve extended above 85,000 cfs by logarithmic plotting).

Remarks--No significant diversion.

467. Big Creek near Polson, Mont. 1

Location.--Lat 47°42'10", long. 114°02'50", in NW₁ NW₁ sec. 4, T. 22 N., R. 19 W., on left bank just downstream from power plant, three-quarters of a mile upstream from mouth, and 7 miles east of Polson.

Drainage area.--6.41 sq mi (revised).

Gage.--Water-stage recorder and concrete control. Altitude of gage is 3,150 ft (by barometer).

Average discharge.--15 years (1917-32), 6.64 cfs.

Extremes.--1917-32: Maximum discharge observed, 104 cfs June 9, 1917 (gage height, 2.4 ft); no flow at times during November and December 1922, when power plant was shut down.

Remarks.--Records include water diverted by the Flathead irrigation project canal for irrigation of lands downstream, and the Polson municipal water-supply pipeline. Flow regulated by power plant and two reservoirs with a combined capacity of about 200 acre-ft.

468. Flathead Lake at Somers, Mont. 1/

Location.--Lat 48°04'30", long. 114°13'30", in SE₄NE₄ sec. 26, T. 27 N., R. 21 W., at steamboat dock at Somers.

Drainage area.--7,086 sq mi.

Supplemental records available.--Apr. 24 to Aug. 5, 1900, daily lake elevations only, at site near Holt, 6 miles east of Somers (datum unknown), and April 1923 to Dec. 12, 1926, June 29, 1928, to Sept. 30, 1941, daily lake elevations at Polson published in reports of Geological Survey. Oct. 1, 1941, to Sept. 30, 1950, unpublished daily lake elevations at Polson are available in files of Helena District Office.

Gage.--Water-stage recorder. Datum of gage is at mean sea level (Somers datum). Prior to April 1923, staff gages at Polson about 25 miles downstream at approximately same datum.

Extremes.--1908-50: Maximum contents, 2,208,000 acre-ft June 19, 1933 (elevation, 2,896.26 ft); minimum, 347,000 acre-ft Dec. 5, 1936 (elevation, 2,881.07 ft).

Remarks.--Elevation of water surface subject to regulation by Kerr Dam since April 1938. Month-end lake contents computed as follows: Prior to 1942, by using mean of lake elevations on last day of month and first day of following month; 1942-47, by computing mean for the last two days of month and first two days of following month; 1948-50, by using elevation of lake at 12 p.m. on the last day of month. Contents shown is that above 2,878 ft.

1/ Published as Flathead Lake at Polson prior to April 1923.

Contents, in thousands of acre-feet, on last day of month, of Flathead Lake at Somers, Mont.

b Computed from elevations at Polson.

Note.—Prior to April 1923 contents obtained from elevations at Polson. Prior to 1942 figures of contents not previously published.

469. Flathead River near Polson, Mont.

Location.--Lat 47°40'50", long. 114°15'10", in NW¹SE¹ sec. 11, T. 22 N., R. 21 W., on left bank half a mile downstream from Kerr Dam, 4 miles west of Polson, and 5 miles downstream from Flathead Lake.

Drainage area.--7,096 sq mi (revised). At sites prior to Oct. 1, 1941, 7,117 sq mi (revised).

Gage.--Water-stage recorder. Datum of gage is 2,693.70 ft above mean sea level (levels by Montana Power Co.). Prior to Nov. 24, 1928, staff and chain gages and Nov. 24, 1928, to Sept. 30, 1941, water-stage recorder, at sites 6 miles downstream all at datum 2,629.20 ft above mean sea level (river profile survey).

Average discharge.--43 years (1907-50), 11,230 cfs.

Extremes.--1907-50: Maximum discharge, 82,100 cfs May 29, 30, 1928 (gage height, 17.1 ft, site and datum then in use, from graph based on gage readings); minimum, probably less than 5 cfs Apr. 13, 1938; minimum daily, 32 cfs Apr. 12, 1938.

Remarks.--Diversion for irrigation of about 10,000 acres above station. Flathead Project pumps can divert up to 12,000 acre-ft per month when required for irrigation of lands downstream from station. Flow regulated since April 1938 by Flathead Lake (see above).

485. Mission Valley Reservoirs, Mont.

A group of eight reservoirs in area east of and tributary to Flathead River and Jocko River, operated for irrigation. Gages are nonrecording set to approximate sea level datum. Records furnished by Office of Indian Affairs.

Twin Reservoir.--Lat $47^{\circ}40'$, long. $114^{\circ}05'$, in sec. 18, T. 22 N., R. 19 W., at outlet works 4 miles southeast of Polson, fed entirely by various canals; storage began in 1932; usable capacity of 1,210 acre-ft at elevation 3,095 ft.

Extremes.--1940-50: Maximum contents observed, 800 acre-ft June 30, 1947; no storage at times in July 1941, August, September 1944.

Pablo Reservoir.--Lat $47^{\circ}38'$, long. $114^{\circ}08'$, in sec. 27, T. 22 N., R. 20 W., at outlet works 3 miles south of Polson, fed entirely by various canals, some water supplied by Flathead pumping plant; storage began in 1914; usable capacity of 25,000 acre-ft, at elevation 3,211.3 ft.

Extremes.--1940-50: Maximum contents observed, 25,170 acre-ft June 1, 4, 1948; minimum observed, 680 acre-ft Aug. 31, 1949.

Lower Crow Reservoir.--Lat $47^{\circ}30'00"$, long. $114^{\circ}14'10"$, in S $\frac{1}{2}$ sec. 11, T. 20 N., R. 21 W., at outlet works on Crow Creek 6 miles west of Ronan; storage began in 1933; usable capacity of 10,350 acre-ft at elevation 2,877 ft.

Extremes.--1940-50: Maximum contents observed, 10,770 acre-ft May 21, 22, 1948; minimum observed, 1,150 acre-ft Oct. 31, 1945, Oct. 31, 1946.

Kicking Horse Reservoir.--Lat $47^{\circ}27'10"$, long. $114^{\circ}04'40"$, in sec. 31, T. 20 N., R. 19 W., at outlet works 5 miles south of Ronan, fed entirely by various canals; storage began in 1930; usable capacity of 8,350 acre-ft at elevation 3,061.94 ft.

485. Mission Valley Reservoirs, Mont.--Continued

Extremes.--1940-50: Maximum contents observed, 8,080 acre-ft May 22, 1948; minimum observed, 560 acre-ft Sept. 30, 1944.

Ninepipe Reservoir.--Lat $47^{\circ}28'0''$, long. $114^{\circ}08'$, in sec. 27, T. 20 N., R. 20 W., at outlet works 2 miles northeast of Charlo, fed entirely by various canals; storage began in 1911; usable capacity of 14,870 acre-ft at elevation 3,010 ft.

Extremes.--1940-50: Maximum contents observed, 15,540 acre-ft June 8, 13, 14, 1948; minimum observed, 281 acre-ft Sept. 30, 1947.

McDonald Reservoir.--Lat $47^{\circ}26'00''$, long. $113^{\circ}59'30''$, in NE $\frac{1}{4}$ sec. 10, T. 19 N., R. 19 W., at outlet works on Post Creek 9 miles east of Charlo; storage began in 1919; usable capacity of 8,220 acre-ft at elevation 3,598 ft.

Extremes.--1940-50: Maximum contents observed, 8,160 acre-ft June 30, 1942, May 28, June 11, 1948; minimum observed, 185 acre-ft Oct. 31, 1943.

Mission Reservoir.--Lat $47^{\circ}18'50''$, long. $114^{\circ}01'20''$, in S $\frac{1}{2}$ sec. 16, T. 18 N., R. 19 W., at outlet works on Mission Creek 4 miles east of St. Ignatius, fed by water diverted from Jocko River; storage began in 1935; usable capacity of 7,250 acre-ft at elevation 3,406 ft.

Extremes.--1940-50: Maximum contents observed, 7,720 acre-ft May 29, June 11, 1948; no storage at times during September 1949.

Tabor Reservoir.--Lat $47^{\circ}15'50''$, long. $113^{\circ}56'10''$, in N $\frac{1}{2}$ sec. 6, T. 17 N., R. 18 W., at outlet works on Dry Creek 8 miles southeast of St. Ignatius, fed by water diverted from Jocko River; storage began in 1919; usable capacity of 23,000 acre-ft at elevation 4,024 ft.

Extremes.--1940-50: Maximum contents observed, 23,310 acre-ft July 8, 1948; minimum observed, 150 acre-ft Sept. 30, 1949.

486. Lower Jocko Lake near Arlee, Mont.

Location.--Lat $47^{\circ}12'20''$, long. $113^{\circ}45'40''$, in NE $\frac{1}{4}$ sec. 28, T. 17 N., R. 17 W., at dam on Middle Fork Jocko River 15 miles east of Arlee.

Drainage area.--7.39 sq mi.

Gage.--Staff gage. Datum of gage is at mean sea level (levels by Office of Indian Affairs).

Extremes.--1940-50: Maximum contents observed, 6,700 acre-ft June 8, 1948; no storage during winter months of most years.

Remarks.--Storage began in 1937 for irrigation. Reservoir has a usable capacity of 7,600 acre-ft at elevation 4,350 ft. Transmountain diversion takes water from Flacid Creek in SE $\frac{1}{4}$ sec. 29, T. 17 N., R. 16 W., to Upper Jocko Lake, thence to Lower Jocko Lake.

Cooperation.--Records furnished by Office of Indian Affairs.

504. Thompson River near Thompson Falls, Mont.

Location.--Lat 47°35'20" (revised), long. 115°13'50", in SE $\frac{1}{4}$ sec. 7, T. 21 N., R. 28 W., near center of downstream side of bridge 1 mile upstream from mouth and 5 miles east of Thompson Falls.

Drainage area.--643 sq mi.

Supplemental records available.--Oct. 1, 1911, to Sept. 30, 1916, occasional gage heights, discharges, and discharge measurements.

Gage.--Staff gage. Altitude of gage is 2,410 ft (from topographic map).

Extremes.--1911-16: Maximum discharge observed, 3,180 cfs May 29, 1913 (gage height, 7.8 ft), but probably was exceeded in 1916; minimum not determined.

Flood of May-June 1948 reached a discharge of 6,190 cfs, by slope-area determination at site half a mile downstream.

Remarks.--One bypass diversion for irrigation of bench lands adjoining the Clark Fork between mouth of Thompson River and Thompson Falls.

505. Thompson Falls Reservoir at Thompson Falls, Mont.

Location.--Lat 47°35'30", long. 115°21'10", near east line of sec. 7, T. 21 N., R. 29 W., at dam on Clark Fork at Thompson Falls.

Drainage area.--20,968 sq mi.

Gage.--Staff gage. Datum of gage is at mean sea level (levels by The Montana Power Company).

Extremes.--1939-50: Maximum contents observed, 16,060 acre-ft Nov. 30, 1950; minimum observed, 1,890 acre-ft Apr. 30, 1950.

Remarks.--For power development, first generator installed July 1915. Reservoir has usable capacity of 15,000 acre-ft at elevation 2,396 ft.

Cooperation.--Records furnished by The Montana Power Co.

506. Prospect Creek near Thompson Falls, Mont.

Location.--Lat $47^{\circ}35'10''$, long. $115^{\circ}21'20''$ (revised), in NE $\frac{1}{4}$ NE $\frac{1}{4}$ sec. 18, T. 21 N., R. 29 W., on left bridge abutment just upstream from Dry Creek and about 1 mile southwest of Thompson Falls.

Drainage area.--145 sq mi (revised).

Supplemental records available.--October 1911 to September 1916, discharge measurements and occasional gage heights and discharges.

Gage.--Staff gage. Altitude of gage is 2,410 ft (from topographic map).

Extremes.--1911-16: Maximum discharge observed, 1,860 cfs May 29, 1913 (gage height, 7.5 ft), but may have been exceeded during period of no gage-height record in 1916; minimum not determined.

Flood of May-June 1948 reached a discharge of 2,800 cfs, from contracted opening determination.

Remarks.--A powerplant when in operation has diverted about 40 cfs past station since Feb. 15, 1913. No other diversion or regulation above station.

507. Clark Fork near Heron, Mont.

Location.--Lat $48^{\circ}04'$, long. $115^{\circ}59'$ in sec. 28, T. 27 N., R. 34 W., on left bank 600 ft upstream from Dead Horse Creek, $1\frac{1}{2}$ miles northwest of Heron, and 3 miles east of Montana-Idaho State line.

Drainage area.--21,800 sq mi, approximately.

Gage.--Water-stage recorder. Datum of gage is 2,078.00 ft above mean sea level, datum of 1929, supplementary adjustment of 1947. Prior to Oct. 30, 1928, staff gage and Oct. 31, 1928, to Jan. 2, 1931, water-stage recorder at datum 10 ft higher.

Average discharge.--22 years (1928-50), 19,940 cfs.

Extremes.--1928-50: Maximum discharge, 153,000 cfs May 29 to June 1, 1948; maximum gage height, 50.97 ft May 31, 1948; minimum discharge, 1,210 cfs (revised) Dec. 23, 1935 (gage height, 7.59 ft), from rating curve extended below 4,000 cfs; minimum daily, 1,400 cfs (revised) Feb. 12, 1936.

Maximum discharge known, 195,000 cfs in June 1894 (gage height, 59.1 ft, present datum, from floodmark an eighth of a mile downstream).

Remarks.--Some regulation by Flathead Lake (see p. 377); diurnal fluctuations at low flow caused by powerplant at Thompson Falls. Diversions from tributaries for irrigation above station.

513. Pend Oreille River at Priest River, Idaho 1/

Location.--Lat 48°10'30", long. 116°55'30", in lot 4, sec. 26, T. 56 N., R. 5 W., on left bank at town of Priest River, 1½ miles downstream from Priest River.

Drainage area.--24,200 sq mi, approximately.

Gage.--Water-stage recorder after Sept. 22, 1928. Datum of gage is 2,000.0 ft above mean sea level datum of 1929. Prior to May 1, 1905, wire-weight gage at approximately same site at different datum. May 1, 1905, to Nov. 30, 1912, staff gage at Newport about 6 miles downstream at different datum.

Average discharge.--38 years (1903-41), 24,820 cfs (unadjusted).

Extremes.--1903-41: Maximum discharge, 136,000 cfs June 15, 1913, and June 21, 1933; minimum, 2,200 cfs Dec. 12, 1919 (but may have been less during periods of ice effect). Maximum stage known, 72.9 ft June 1894, estimated from nearby floodmarks (discharge, about 200,000 cfs, revised).

Remarks.--Many diversions for irrigation above station (337,600 acres reported irrigated in 1946). Regulation by several reservoirs in Pend Oreille basin having a combined capacity of about 289,750 acre-ft (see elsewhere in this report).

Monthly and yearly mean discharge, in cubic feet per second

515. Pend Oreille River below Z Canyon, near Metaline Falls, Wash.^{1/}
(International gaging station)

Location.--Lat 48°59', long. 117°21', in lot 2, sec. 11, T. 40 N., R. 43 E., on right bank three-quarters of a mile downstream from Z Canyon, 1½ miles south of international boundary, 5 miles downstream from Slate Creek, and 10 miles downstream from Metaline Falls.

Drainage area.--25,200 sq mi, approximately. At site prior to October 1928, 25,100 sq mi, approximately.

Supplemental records available.--November 1908 to September 1910, gage heights only.

Records of chemical analyses and water temperatures for the period January 1949 to September 1950 are published in reports of Geological Survey.

Gage.--Water-stage recorder. Datum of gage is 1,721.80 ft above mean sea level, datum of 1929 (levels by Corps of Engineers). Nov. 4, 1908, to Sept. 4, 1910, and Oct. 1, 1912, to Dec. 18, 1928, staff gages at Metaline Falls 10 miles upstream at datum 262.2 ft higher.

Average discharge.--38 years (1912-50), 25,900 cfs.

Extremes.--1912-50: Maximum discharge, 171,300 cfs June 13, 1948 (gage height, 60.25 ft); minimum, 2,500 cfs Dec. 12, 1919 (gage height, -2.4 ft, site and datum then in use).

Flood of June 1894 reached a stage of 69.0 ft, from floodmarks.

Remarks.--Many diversions for municipal use and irrigation of about 340,000 acres above station. Flow partly regulated by several reservoirs upstream (combined capacity 1,528,800 acre-ft in 1950).

Cooperation.--This station is one of the international gaging stations maintained by the United States under agreement with Canada.

1/ Published as Salmon River near Waneta, British Columbia, 1936-42.

517. Columbia River at international boundary
(International gaging station)

Location.--Lat 49°00'03", long. 117°37'40", in SE¹ sec. 4, T. 40 N., R. 41 E., on left bank at international boundary, half a mile downstream from Pend Oreille River.

Drainage area.--59,700 sq mi, approximately.

Gage.--Water-stage recorder. Datum of gage is at mean sea level (Bureau of Reclamation 1937 datum). Prior to Apr. 27, 1939, staff gage at same site and datum. Auxiliary water-stage recorder 2.2 miles downstream from base gage at same datum.

Average discharge.--13 years (1937-50), 91,790 cfs (revised).

Extremes.--1937-50: Maximum discharge, 550,100 cfs June 12, 1948 (elevation, 1,338.13 ft); minimum, 20,700 cfs Mar. 9, 1944 (elevation, 1,289.91 ft).

Flood of June 1894 reached a stage of 1,346 ft, from information by Bureau of Reclamation (discharge, 680,000 cfs).

Flow of about 12,900 cfs occurred Jan. 30 or 31, 1937, based on information from other gaging stations (elevation, 1,287.9 ft), from rating curve extended below 1,291.6 ft; may have been as low sometime in January 1930.

Remarks.--Many diversions for irrigation above gage but quantity very small percentage of flow past gage. Some fluctuation at low flow caused by power plant on Kootenai River. Flow affected by regulation in Kootenai and Pend Oreille River basins.

Cooperation.--This station is one of the international gaging stations maintained by the United States under agreement with Canada.

523. Kettle River at Cascade, British Columbia
(International gaging station)

Location.--Lat $49^{\circ}01'35''$, long. $118^{\circ}12'20''$, on left bank at highway bridge at Cascade, half a mile downstream from Cascade Falls.

Drainage area.--3,550 sq mi, approximately.

Gage.--Staff gage. Datum of gage is 1,449.79 ft above mean sea level (Geodetic Survey of Canada, datum of 1928).

Average discharge.--18 years (1916-34), 2,497 cfs.

Extremes.--1916-34: Maximum discharge observed, 29,300 cfs June 8, 1921; minimum discharge, 60 cfs Jan. 24, 25, 1930.

Remarks.--Diversions above station for irrigation of about 650 acres in the United States and 2,150 acres in Canada (1934). A small part of the stream flow is utilized for domestic purposes at Grand Fork, British Columbia. Slight regulation on the North Fork by dam at Grand Forks, British Columbia.

Cooperation.--Records 1916-30, not previously published by Geological Survey, furnished by Canadian Department of Resources and Development. This station is one of the international gaging stations maintained by Canada under agreement with the United States.

524. Kettle River near Laurier, Wash.
(International gaging station)

Location.--Lat 48°59'10", long. 118°13'00", in NW $\frac{1}{4}$ sec. 11, T. 40 N., R. 36 E., on right bank 500 ft downstream from Deep Creek, 1 $\frac{1}{2}$ miles southeast of Laurier, and 12 miles upstream from Boulder Creek.

Drainage area.--3,800 sq mi, approximately.

Gage.--Water-stage recorder. Datum of gage is 1,425.5 ft above mean sea level, international joint adjustment of 1947. Prior to Jan. 3, 1930, staff gage at same site and datum.

Average discharge.--21 years (1929-50), 2,696 cfs.

Extremes.--1929-50: Maximum discharge, 35,000 cfs May 29, 1948 (gage height, 17.25 ft); minimum not determined, probably occurred during winter of 1929-30. Maximum stage known, about 22 ft in 1894, from information by local residents.

Remarks.--North Fork partly regulated by reservoir at Grand Forks, British Columbia. Numerous diversions for domestic use and irrigation of about 720 acres in the United States (1946) and 2,090 acres in Canada (1940).

Cooperation.--This station is one of the international gaging stations maintained by the United States under agreement with Canada.

525. Kettle River at Boyds, Wash.

Location.--Lat $48^{\circ}43'20''$, long. $118^{\circ}07'20''$, in NW $\frac{1}{4}$ sec. 9, T. 37 N., R. 37 E., on right bank at Boyds, $1\frac{1}{4}$ miles upstream from Sherwood Creek, and 4 miles upstream from mouth.

Drainage area.--4,070 sq mi (revised), approximately.

Gage.--Staff gage. Altitude of gage is 1,240 ft (from topographic map). Prior to Oct. 8, 1913, staff gage 1 mile downstream at different datum.

Extremes.--1913-15: Maximum discharge, 18,000 cfs May 17, 1914 (gage height, 10.00 ft); minimum, 288 cfs Aug. 30, 1914 (gage height, 0.28 ft).

Remarks.--Small diversions for irrigation and domestic use. Flow slightly regulated by power plant at Cascade, British Columbia.

526. Columbia River at Kettle Falls, Wash.

Location.--Lat 48°37'20", long. 118°07'00", in northwest corner lot 1, sec. 14, T. 36 N., R. 37 E., on right bank at Kettle Falls, 3 $\frac{1}{4}$ miles upstream from Colville River.

Drainage area.--64,500 sq mi, approximately.

Supplemental records available.--Gage-height records, except 1916-20, collected for Columbia River since 1895 are contained in reports of U. S. Weather Bureau.

Gage.--Water-stage recorder. Datum of gage is at mean sea level, unadjusted. Apr. 1, 1916, to June 4, 1921, staff gage 1 $\frac{1}{2}$ miles upstream at different datum. June 5, 1921, to May 2, 1931, staff gage 1 $\frac{1}{2}$ miles downstream at different datum.

Average discharge.--28 years (1913-41), 98,040 cfs.

Extremes.--1913-41: Maximum discharge, 468,000 cfs June 14, 15, 1913 (gage height, 34.2 ft, from flood marks, referred to U. S. Weather Bureau gage at Marcus, the datum of which is 1,205.55 ft above mean sea level, unadjusted); minimum, 13,000 cfs (estimated because of ice effect) Jan. 18-21, 1930, Jan. 31, 1937.

Maximum discharge known, 700,000 cfs during flood of 1894 (based on best available information from several sources).

Remarks.--Some diversion for irrigation above station. Flow partly regulated by Kootenay Lake (see Columbia River at Birchbank, B.C., p. 310).

530. Colville River at Kettle Falls, Wash.^{1/}

Location (revised).--Lat 48°35'40", long. 118°03'30", in sec. 29, T. 36 N., R. 38 E., on right bank an eighth of a mile downstream from Stevens County Light and Power Co.'s plant at foot of Meyers Falls, half a mile south of town of Kettle Falls, and about 2 miles upstream from Franklin D. Roosevelt Lake.

Drainage area.--1,050 sq mi, approximately.

Gage.--Water-stage recorder. Altitude of gage is 1,500 ft (from topographic map). Prior to Oct. 1, 1932, staff gage 500 ft upstream at different datum. Oct. 21, 1932, to Sept. 19, 1938, staff gage 200 ft upstream at datum 5 ft lower. Sept. 20, 1938, to Mar. 20, 1949, staff gage at present site and datum.

Average discharge.--28 years (1922-50), 263 cfs.

Extremes.--1922-50: Maximum discharge, 2,690 cfs (revised) Apr. 19, 1938 (revised) (gage height, 6.20 ft, revised, from graph based on gage readings); minimum observed, 0.5 cfs Aug. 15, 1930.

Remarks.--Several small diversions for irrigation above station. Slight regulation by power plant and small reservoir above falls an eighth of a mile upstream.

531. Hall Creek at Inchelium, Wash.^{1/}

Location.--Lat $48^{\circ}18'20''$, long. $118^{\circ}11'10''$ in NE $\frac{1}{4}$ sec. 6, T. 32 N., R. 37 E., on right bank three-quarters of a mile upstream from highway bridge, about 1 mile upstream from mouth, and 1 mile northwest of Inchelium.

Drainage area.--About 170 sq mi (revised).

Gage.--Water-stage recorder. Altitude of gage is 1,250 ft (from river-profile map).

Prior to May 16, 1913, and Aug. 1, 1915, to Jan. 27, 1916, staff gage half a mile downstream at different datum. May 16, 1913, to July 31, 1915, staff gage 2 miles upstream at different datum.

Average discharge.--9 years (1913-22), 81.4 cfs.

Extremes.--1913-29: Maximum discharge, 1,010 cfs (revised) Apr. 16, 1914 (gage height, 3.24 ft, from graph based on gage readings); minimum discharge, not determined.

Remarks.--Slight fluctuation at low flow by powerplant above station.

539. St. Joe River at Avery, Idaho

Location.--Lat 47°15', long. 115°49', in sec. 15, T. 45 N., R. 5 E., on left bank at Avery and 0.5 mile downstream from North Fork.

Drainage area.--594 sq mi.

Gage.--Staff gage. Datum of gage is 2,474.13 ft above mean sea level, datum of 1912.

Prior to Sept. 18, 1912, staff gages at sites within 700 ft downstream at different datums.

Extremes.--1911-17: Maximum discharge observed, 17,400 cfs May 15, 1917 (gage height, 7.1 ft), from rating curve extended above 4,800 cfs; minimum not determined, probably occurred during winter when discharge relation was seriously affected by ice.

Remarks.--No diversion above station.

542. Coeur d'Alene Lake at Coeur d'Alene, Idaho

Location.--Lat 47°40', long. 116°46', in sec. 24, T. 50 N., R. 4 W., 500 feet southwest of south end of Eleventh Street, Coeur d'Alene.

Drainage area.--3,700 sq mi (revised), approximately.

Gage.--Water-stage recorder. Datum of gage is 2,100 ft above mean sea level, referred to originally accepted elevation (2,157.40 ft) of Geological Survey bench mark in southeast corner of Merriam Building (see Water-Supply Paper 882). Apr. 26, 1903, to Feb. 13, 1905, staff gage at mouth of St. Joe River, datum about 18.7 ft higher. Feb. 14, 1905, to Mar. 23, 1921, staff gage at present site and datum.

Extremes.--1903-50: Maximum contents, 834,900 acre-ft Dec. 25, 1933 (elevation, 2,139.05 ft); minimum, 2,700 acre-ft below zero of contents table Oct. 10-12, 1904, Sept. 24, 25, 1905, Oct. 14 to Nov. 3, 1906 (elevation, 2,119.9 ft).

Maximum contents known prior to 1903, 753,300 acre-ft May 31, 1894 (elevation, 2,137.6 ft, from high-water marks).

Remarks.--Water is impounded by dam at Post Falls for power generation at Post Falls and other plants on Spokane River. Storage is within natural range of lake stage. Contents given herein are those above elevation of 2,120.00 ft. Capacity of lake between elevations 2,120 and 2,140 ft is 889,000 acre-ft. Contents records prior to 1947 not previously published.

Cooperation.--Record of elevations and area curve, which is basis of capacity table, furnished by Washington Water Power Co.

Contents, in acre-feet, on last day of month.
